Cyber security has become increasingly recognized as one of the most challenging issues facing businesses and organizations. In our digital world, attacks occur on an almost hourly basis and must be dealt with as quickly as possible. Not only does the risk of a cyber attack increase, but cyber criminals and nation states are increasingly looking to steal data from businesses in order to identify weaknesses and information that can be monetized. To ensure the protection of your information, data, and assets, you should establish a sophisticated cyber security infrastructure and make sure you are performing regular security audits. Every business in the world should implement security measures and ensure they are up to date. The Cyber Security Predictions for 2017 Sophos Blog highlighted some of the most important predictions for 2017, which include: The internet of things (IoT) is going to be a major security concern in 2017. IoT devices are becoming increasingly prevalent in our world. They provide improved convenience and added value for people and the businesses that supply them. It is therefore important to make sure IoT devices are secured appropriately. Most companies are currently still considering IoT security. Unfortunately, some IoT devices are not secure. They contain information that could be used for malicious purposes. According to the global threat index, there will be approximately 40 million new malware threats in 2017, with 50% of them targeting Android. Attacks against mobile devices have increased significantly in the past two years. In 2017, this figure is expected to increase to more than 100 million. The global threat index also states that between 2016 and 2017, there will be 200 million global ransomware infections. Ransomware is malware that is designed to lock a computer and hold the data it contains for ransom. The global threat index states that attacks are increasing due to a rise in information gathering and phishing scams. Companies are also using the popularity of cryptocurrencies to gain a competitive advantage. In 2016, more than 12.6 million cryptocurrency-related scams were reported worldwide. This was a 190% increase from 2015. The number of these scams is expected to grow. Bitcoin is the most popular type of cryptocurrency and it is growing rapidly. In 2016, more than 20,000 new Bitcoin wallets were created and the total number of wallets has now grown to over 61 million. The number of Bitcoin wallets increased by more than 500,000. This was the highest growth since 2013. The number of Bitcoin wallets has increased on a year-on-year basis for the last five 82157476af
